

27" Indoor Open Frame

Digital signage or POS located in indoor public areas (i.e. hypermarkets, cinemas, restaurants, casinos, arcades, etc.) do not require high brightness displays. However, they need a rugged exterior to prevent accidental impact from damaging the display and a certain level of air-tightness to stop splashing liquids from penetrating the system body. Since a 27" LCD is relatively large, we replaced the décor glass with 2.8mm chemically strengthened CNC glass. The front bezel of the open frame encloses the other edges of the décor glass and forms a complete flat surface that confers better protection to the display. The X0270-000 also adopts a thin and streamlined design to reduce overall system weight while still providing a left and right side bracket for easy assembly.

Features

- True-flat Water Resistant Design
- 8mm chemically strengthened printed black border décor glass
- Décor glass completely sealed with rubber gasket meets IP65 dust and water ingress protection standard
- Black enameled metal back panel protects LCD and control board
- VESA mount to facilitate assembly
- Left/right side brackets to facilitate side /rear mounting
