1 Product Overview

GW5A series of FPGA Products are the 5 series products of Arora family, with abundant internal resources, a new-architecture and high-performance DSP supporting AI operations, high-speed LVDS interfaces, and abundant BSRAM resources. At the same time, it integrates self-developed DDR3 and provides a variety of packages. It is suitable for applications such as low power, high performance and compatibility designs.

GOWINSEMI provides a new generation of FPGA hardware development environment that supports FPGA placement & routing, bitstream generation and download, etc.

1.1 Features

- Lower power consumption
 - 22nm SRAM process
 - Core Power(LV version): 0.9 V/1.0 V
 - Core voltage(EV version): 1.2 V
 - Supports dynamic on/off of clock
- Abundant basic logic cells
 - Provides 23K ~ 138K LUT4s
 - Supports shadow SRAMs
- Block SRAMs with multiple modes
 - Supports Dual Port, Single Port, Semi Dual Port, and ROM
 - Supports bytes write enable
 - Supports ECC detection and error correction
- High performance DSP blocks with a new architecture
 - High performance digital signal processing
 - Supports 27x18, 12x12, 27x36 multiplier and 48-bit accumulator
 - Supports cascading of multipliers
 - Supports pipeline mode and bypass mode
 - Pre-addition operation for filter function
 - Supports barrel shifter
- A new and flexible X-channel oversampling ADC with high accuracy, no external voltage source required
- Supports MIPI D-PHY RX/TX hardcore
 - Supports MIPI DSI and MIPI CSI-2 RX/TX
 - Up to 2.5 Gbps per MIPI lane(RX/TX)

- Supports up to eight data lanes and two clock lanes, with the max. transmission bandwidth up to 20 Gbps
- GPIO supports MIPI D-PHY RX/TX (MIPI IO)
 - GPIO can be configured as MIPI DSI and MIPI CSI-2 RX/TX interfaces
 - MIPI D-PHY RX/TX transfer rate up to 2.0 Gbps per lane
- Supports MIPI C-PHY RX/TX hardcore
 - One MIPI Quad supports up to 3-trios data lanes
 - RX/TX supports up to 2.5 Gsps data rate per lane
- GPIO supports MIPI C-PHY RX/TX MIPI IO
- Supports various SDRAM interfaces, up to DDR3 1066 Mbps
- Multiple I/O standards
 - Hysteresis option for input signals
 - Supports drive strengths of 2 mA, 4 mA, 6 mA, 8 mA, 12 mA, 16 mA, 24 mA, etc.
 - Individual Bus Keeper, Pull-up, Pull-down, and Open Drain options
- Hot Socket
- 16 global clocks, 6/8/12 high-performance PLLs, 16/20/24 high speed clocks
- MIPI D-PHY, PLL and ADC modules support Mini Dynamic Re-Program Port (mDRP)
- Configuration & Programming
 - JTAG configuration
 - Multiple GowinConfig configurations: SSPI, MSPI, Master CPU, Slave CPU, Master SERIAL, Slave SERIAL
 - Supports programming the SPI Flash directly in JTAG and SSPI modes; For other modes, you can program the SPI Flash using IP
 - Supports background upgrade
 - Supports bitstream file encryption and security bit settings
 - Supports Configuration Memory Soft Error Recovery (CMSER)
 - Supports OTP, a unique 64-bit DNA identifier for each device

1.2 Product Resources

Table 1-1 Product Resources

Device	GW5A-25	GW5A-60	GW5A-138
LUT4	23040	59904	138240
Flip-Flop (REG)	23040	59904	138240
Shadow Static Random Access Memory SSRAM(Kb)	180	468	1080
Block Static Random Access Memory BSRAM(Kb)	1008	2124	6120
Number of BSRAMs	56	118	340
DSP (27-bit x 18-bit)	28	118	298
Maximum Phase Locked Loop ^[1] (PLLs)	6	8	12
Global Clocks	16	16	16
High-speed Clocks	16	20	24
LVDS (Gbps)	1.25	1.25	1.25
DDR3 (Mbps)	1066	1333	1333
MIPI D-PHY Hardcore	2.5Gbps (RX/TX), 4 data lanes 1 clock lane	2.5Gbps (RX/TX), 4 data lanes 1 clock lane	2.5Gbps (RX) 8 data lanes 2 clock lanes
MIPI C-PHY Hardcore	-	2.5Gbps (RX/TX), 3-trios data lanes	-
ADC	1	2	2
Number of GPIO banks	8 ^[2]	11	6
Maximum number of GPIOs	239	320	312
Core voltage	0.9V/1.0V/1.2V ^[3]	0.9V/1.0V/1.2V ^[3]	0.9V/1.0V

Note!

- ^[1] Different packages support different numbers of PLLs, and here is the max. number.
- ^[2] In addition to GPIO Banks, there is one JTAG Bank with four I/Os and one Config Bank with one I/O.
- ^[3] The EV version has a built-in LDO and supports 1.2V V_{CC}.

Table 1-2 GW5A-25 Package Information

Package	Pitch (mm)	Size (mm)	GW5A-25	
			User I/O(True LVDS Pair)	MIPI D-PHY Hardcore
LQ100	0.5	14 x 14	80 (36)	-

Package	Pitch (mm)	Size (mm)	GW5A-25	
			User I/O(True LVDS Pair)	MIPI D-PHY Hardcore
LQ144	0.5	20 x 20	109 (50)	–
MG121N	0.5	6 x 6	82 (36)	RX/TX, Configurable 4 data lanes 1 clock lane
MG196S	0.5	8 x 8	114 (53)	–
PG196S	1.0	15 x 15	110 (48)	RX/TX, Configurable 4 data lanes 1 clock lane
PG256C	1.0	17 x 17	191 (90)	–
PG256	1.0	17 x 17	184 (88)	RX/TX, Configurable 4 data lanes 1 clock lane
PG256S	1.0	17 x 17	194 (93)	–
UG225S	0.8	13 x 13	168 (80)	–
UG256C	0.8	14 x 14	191 (90)	–
UG324	0.8	15 x 15	222 (104)	RX/TX, Configurable 4 data lanes 1 clock lane
UG324S	0.8	15 x 15	239 (116)	–

Note!

2 Architecture

2.1 Architecture

Figure 2-1 Architecture Diagram (GW5A-25)

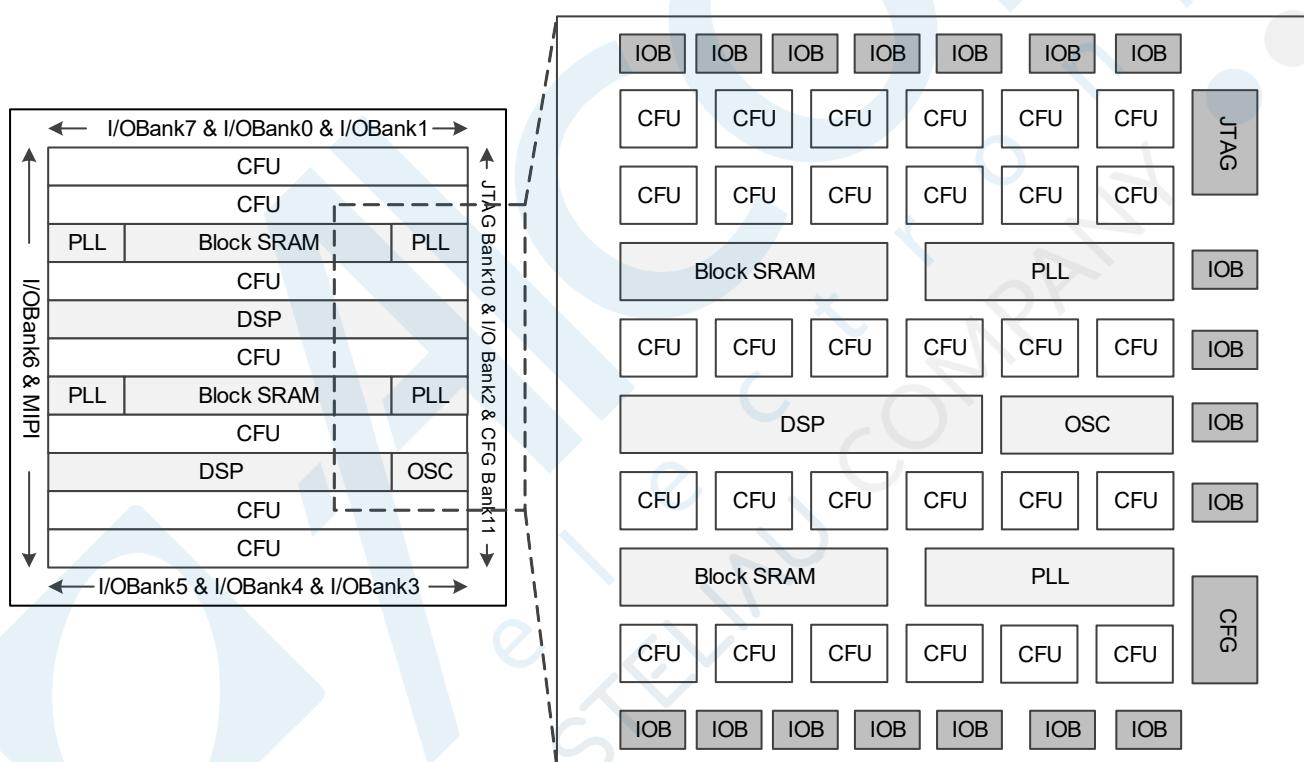

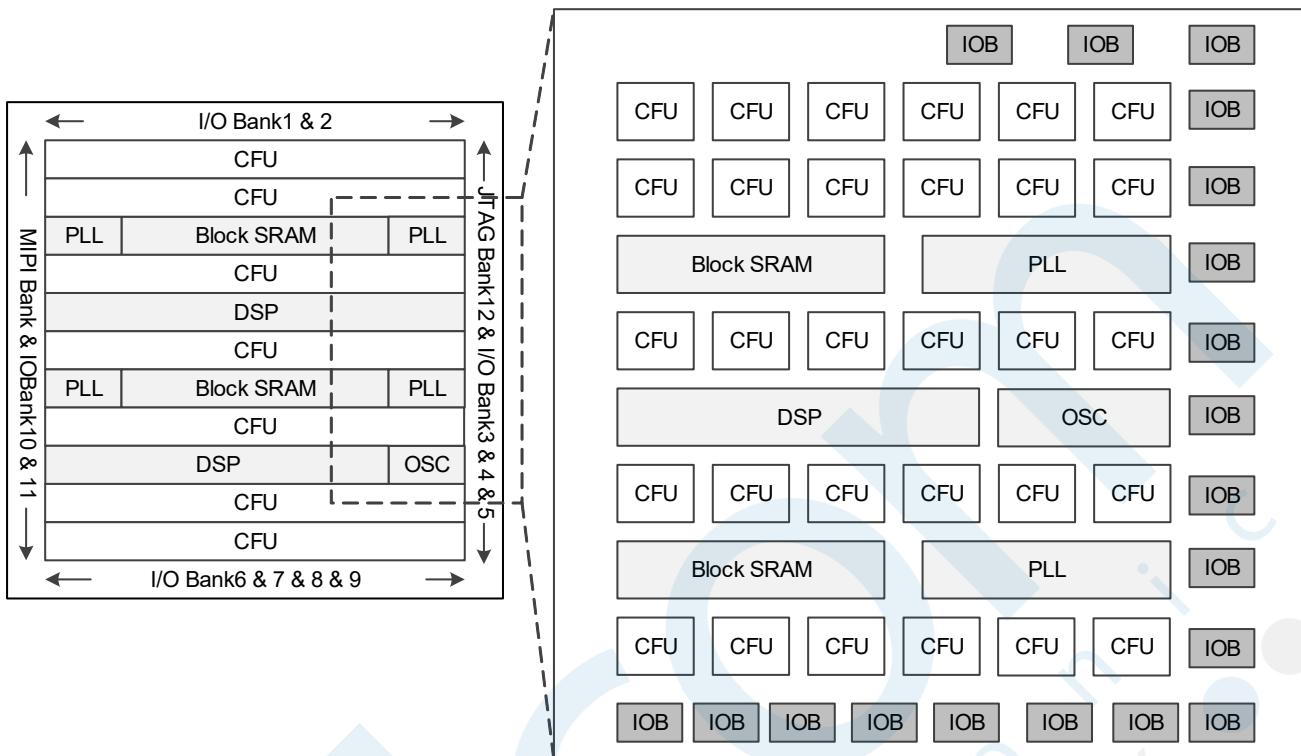

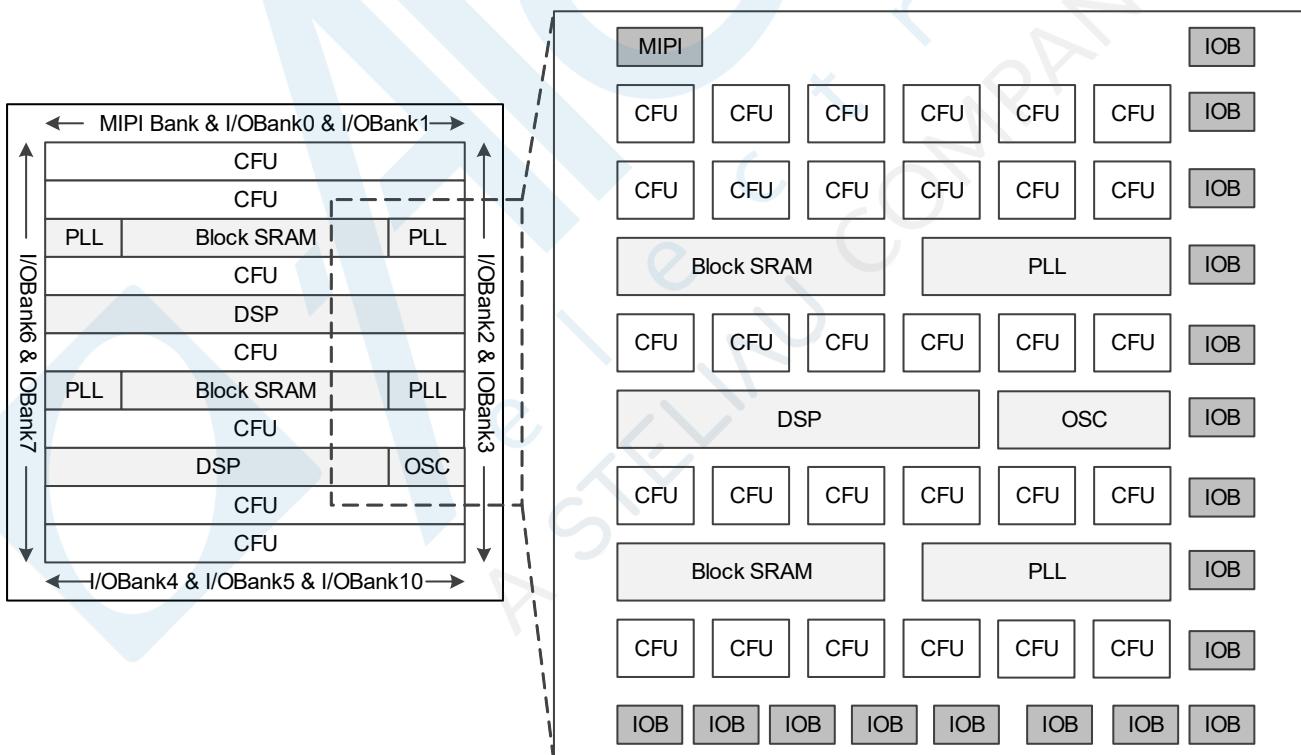

Figure 2-3 Architecture Diagram (GW5A-60)**Figure 2-4 Architecture Diagram (GW5A-138)**

GW5A series of FPGA Products The core of the device is an array of Configurable Function Units (CFU) surrounded by IO blocks. Besides, BSRAMs, DSP blocks, MIPI D-

PHY, ADC, PLLs, and on chip oscillators are supported. For more detailed information, see [1.2 Product Resources](#).

Configurable Function Unit (CFU) is the base cell for the array of the GW5A series of FPGA Products. Devices with different capacities have different numbers of rows and columns. CFU can be configured as LUT4 mode, ALU mode, and memory mode. For more detailed information, see [2.2 Configurable Function Units](#).

The I/O resources are arranged around the periphery of the devices in groups referred to as banks. I/O resources support multiple I/O standards, and support regular mode, SRD mode, generic DDR mode, and DDR_MEM mode. For more detailed information, see [2.3 Input/Output Block](#).

The BSRAM is embedded as a row in the products and supports multiple configuration modes and operation modes. For more detailed information, see [2.4 Block SRAM \(BSRAM\)](#).

GW5A series of FPGA Products are embedded with a brand-new DSP, which can meet the your high-performance digital signal processing requirements DSP. For further details, refer to [2.5 DSP](#).

GW5A series of FPGA Products provide a MIPI D-PHY hardcore supporting the “MIPI Alliance Standard for D-PHY Specification(V1.2)”. For details, see [2.6 MIPI D-PHY](#).

GW5A series of FPGA Products integrate different types of ADCs. Please refer to [2.8 ADC](#) for details.

GW5A series of FPGA Products have embedded PLL resources. PLL blocks provide the ability to synthesize clock frequencies. Frequency adjustment (multiply and division), phase adjustment, and duty cycle can be adjusted using the configuration of parameters . The FPGAs also have an embedded programmable on-chip clock oscillator that supports clock frequencies ranging from 1.67 MHz to 105MHz, providing clocking resources for the MSPI mode. The on-chip clock oscillator also provides programmable user clocks. For more information, see [2.9 Clock](#) and [2.12 On Chip Oscillator](#).

FPGA provides abundant CRUs, connecting all the resources in FPGA. For example, routing resources distributed in CFU and IOB connect resources in CFU and IOB. Routing resources can automatically be generated by Gowin software. In addition, GW5A series of FPGA Products also provide abundant GCLKs, long wires (LW), global set/reset (GSR), and programming options, etc. For more details, see [2.10 Global Reset](#) and [2.11 Programming Configuration](#).

2.2 Configurable Function Units

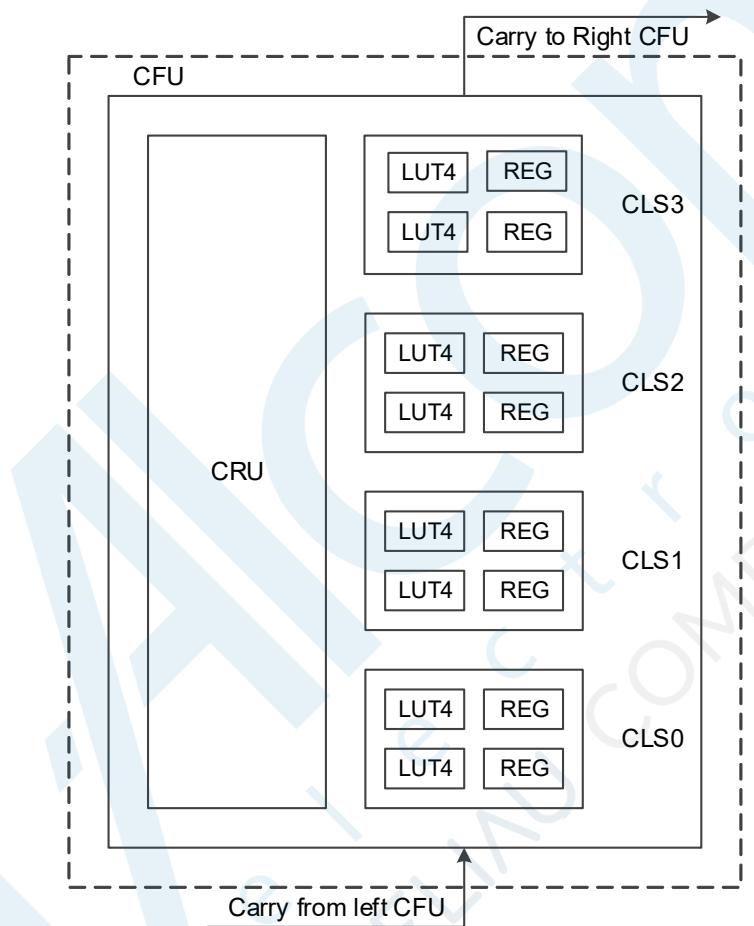

Configurable Function Units (CFUs) are the basic cells for the array of GOWINSEMI FPGA Products. Each basic cell consists of four Configurable Logic Sections (CLSs) and

their routing resource Configurable Routing Units (CRUs). Each CLS includes two 4 input look-up-tables (LUTs) and two registers (REGs), as shown in [Figure 2-5](#).

CLSSs in the CFUs can be configured as basic look-up tables, arithmetic logic units, static random access memories, and read only memories according to application scenarios.

For more details, please see [UG303, Arora V Configurable Function Unit \(CFU\) User Guide](#).

Figure 2-5 CFU Structure View

2.3 Input/Output Blocks

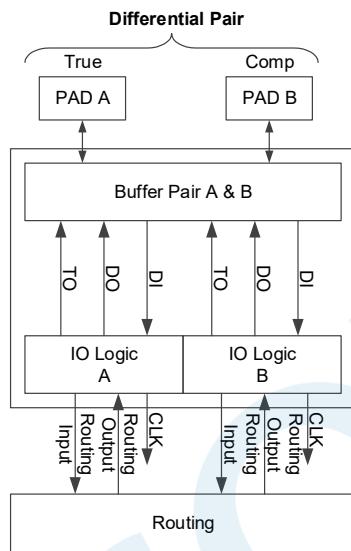

The GPIOs meet a variety of I/O standards and support both single-ended and differential level standards, providing an easy connection with external buses, storage devices, video applications, and other standards.

The basic units are IOB, including I/O buffer, I/O logic, and the relevant programmable routing unit. The programmable routing unit is similar to the CRU in CFU.

As shown in [Figure 2-6](#), each IOB connects to two Pins (Marked as A and B). They can be used as a differential pair or as a single end input/output. The I/O logic supports deserializer, serializer, delay control, and byte alignment, and is suitable for high-speed

data transmission. The programmable routing unit is used to inter-connect I/O blocks with other on-chip resources.

Figure 2-6 IOB Structure View

IOB Features:

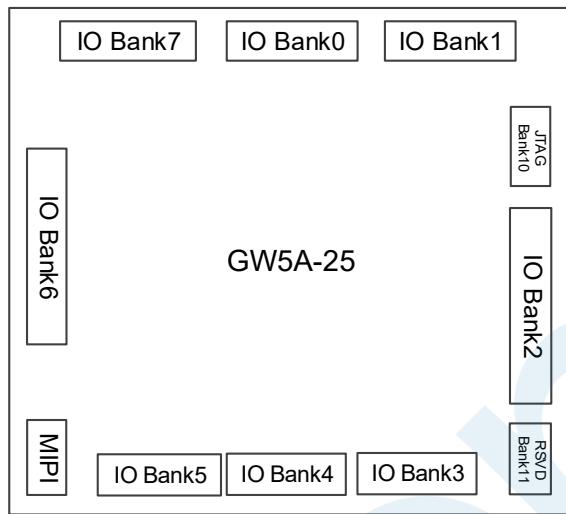

- V_{CCIO} supplied with each bank
- Support multiple levels: LVCMS, PCI, LVTTL, SSTL, HSTL, LVDS, Mini_LVDS, RSDS, PPDS, BLVDS, etc
- Support MIPI and MIPI I3C OpenDrain/PushPull conversion
- Hysteresis option for input signals
- Output drive strength option
- GW5A-60 supports slew rate option for output signals
- Individual bus keeper, pull-up/down resistor, and open drain output options
- Hot Socket
- I/O logic supports SDR, DDR, etc.

2.3.1 I/O Standards

GW5A-25/GW5A-60

GW5A has 8 GPIO Banks. Bank10 is a JTAG Bank with four IOs, Bank11 is a Reserved Bank with one IO, as shown in [Figure 2-7](#).

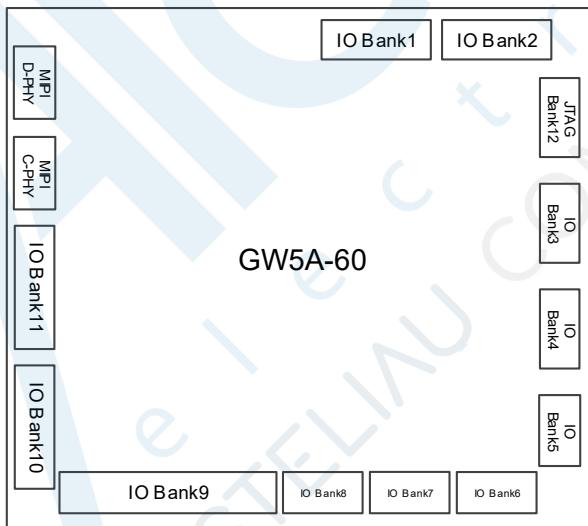

Figure 2-7 GPIO Bank Distribution View (GW5A-25)

Each Bank has independent I/O power supply V_{CCIO} . V_{CCIO} can be set as 3.3V, 2.5V, 1.8V, 1.5V, 1.35V, or 1.2V. The auxiliary voltage V_{CCX} supports 2.5V and 3.3V.

GW5A-60 has 11 GPIO Banks. Bank12 is a JTAG Bank with four IOs, as shown in [Figure 2-8](#).

Figure 2-8 GPIO Bank Distribution View (GW5A-60)

Each Bank has independent I/O power supply V_{CCIO} . V_{CCIO} can be set as 3.3V, 2.5V, 1.8V, 1.5V, 1.35V, or 1.2V. The auxiliary voltage V_{CCX} supports 1.8V, 2.5V, and 3.3V.

To support SSTL, HSTL, etc., each bank also provides one independent voltage source (VREF) as the reference voltage. You can choose from the internal reference voltage of the bank (0.6V, 0.75V, 0.9V, 1.25V, 1.5V, and (36%, 50%, 64%) V_{CCIO}) or the external reference voltage using any IO from the bank.

Different banks in the GW5A series of FPGA Products support different on-chip resistor settings, including single-ended resistor and differential resistor. Single-ended resistor is

set for SSTL/HSTL I/O. Differential resistor is set for LVDS/PPDS/RSDS input. For more details, refer to [UG304, Arora V Programmable IO \(GPIO\) User Guide](#).

The I/O Standards and Configuration Options Device Supported by GW5A-25/GW5A-60 are as listed in [Table 2-1](#) and [Table 2-2](#).

Table 2-1 Output I/O Standards and Configuration Options

I/O Output Standard	Single-ended / Differential	Bank V _{CCIO} (V)	Driver Strength (mA)	Typical Applications
MIPI_CPHY	Differential(TLVDS)	2.5/3.3	2	Mobile Industry Processor Interface
MIPI		1.8/2.5/3.3	2	Mobile Industry Processor Interface

GW5A-138

GW5A -138 has six GPIO Banks (Bank2~7), one configuration Bank (Bank 10). Bank 10 can also be used as an I/O Bank, as shown in [Figure 2-9](#).

Figure 2-9 GPIO Bank Distribution View (GW5A-138)

Each Bank has independent I/O power supply V_{CCIO} . V_{CCIO} can be set as 3.3V, 2.5V, 1.8V, 1.5V, 1.35V, 1.2V, or 1V. The auxiliary voltage V_{CCX} supports 1.8V.

To support SSTL, HSTL, etc., each bank also provides one independent voltage source (VREF) as the reference voltage. You can choose from the internal reference voltage of the bank (0.6V, 0.675V, 0.75V, 0.9V and (33%,42%,50%,58%) V_{CCIO}) or the external reference voltage using any IO from the bank.

Different banks in the support different on-chip resistor settings, including single-ended resistors and differential resistors. Single-ended resistor settings are used for SSTL/HSTL inputs and outputs. Differential resistor settings are used for LVDS/PPDS/RSDS inputs. For more details, refer to [UG304, Arora V Programmable IO \(GPIO\) User Guide](#).

I/O Standards and Configuration Options Device Supported by GW5A -138 are as listed in [Table 2-3](#) and [Table 2-4](#).

Table 2-3 Output I/O Standards and Configuration Options

I/O Output Standard	Single-ended / Differential	Bank V_{CCIO} (V)	Output Drive Strength (mA)	Typical Applications
LVDS25	Differential(TLVDS)	2.5/3.3	3.5/2.5/4.5/6	High-speed point-to-point data transmission

2.3.2 I/O Logic

Figure 2-10 shows the I/O logic output of GW5A series of FPGA Products

Figure 2-10 I/O Logic Output

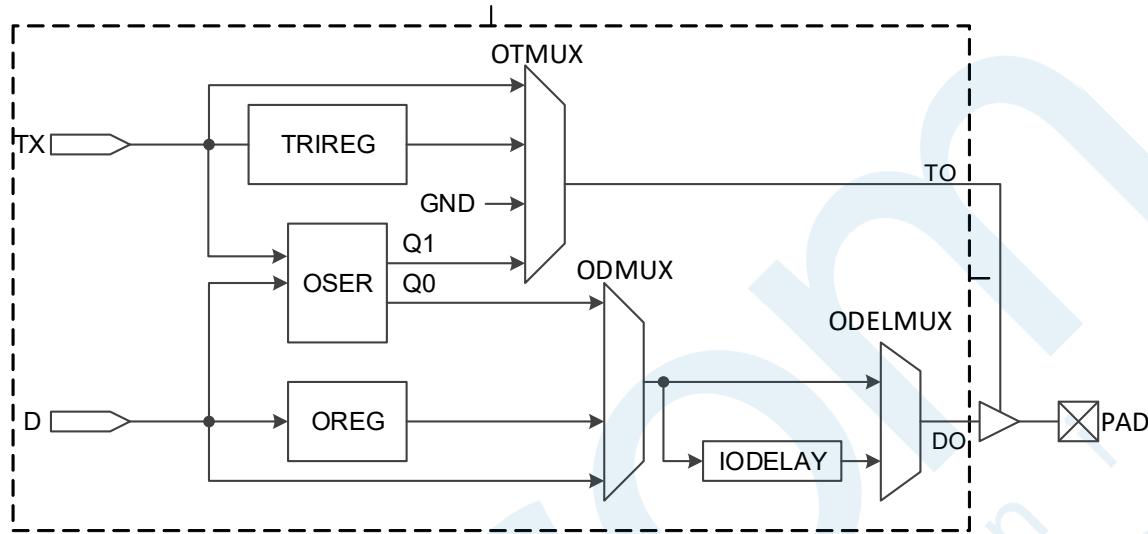

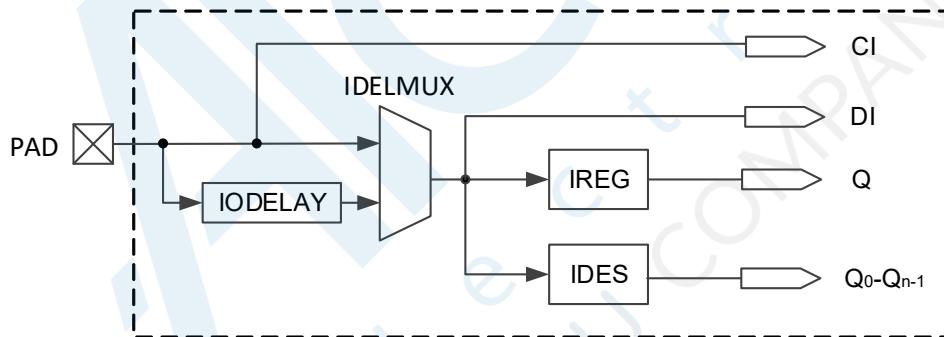

Figure 2-11 shows the I/O logic input of GW5A series of FPGA Products.

Figure 2-11 I/O Logic Input

Descriptions of the I/O logic modules of products are presented below.

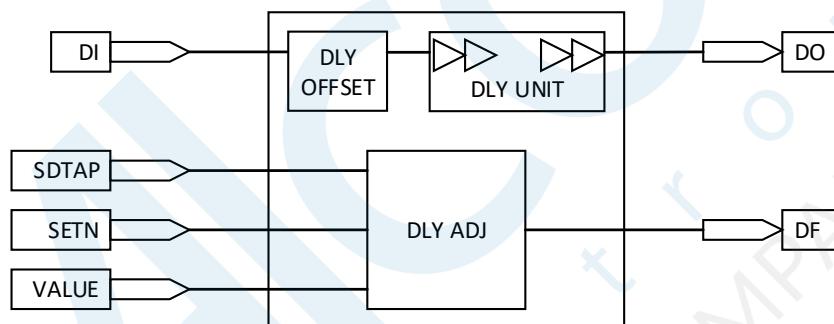

Delay Module

See [Figure 2-12](#) for an overview of the IODELAY. Each I/O contains an IODELAY module, which allows the user to add additional delays to the I/Os to adjust the delay of the input and output signals. The delay time for each step is $T_{dlyunit}$, and the total number of delay steps is DLYSTEP. The total IODELAY delay time is: $T_{total} = T_{dlyoffset} + T_{dlyunit} * DLYSTEP$. The total delay reference time is as shown in [Table 2-5](#).

Table 2-5 Total Delay Reference of IODELAY

	Min.	Typ.	Max.
$T_{dlyoffset}$	200 ps	250 ps	300 ps
$T_{dlyunit}$	10 ps	12.5 ps	15 ps
DLYSTEP	0	-	255

Figure 2-12 IODELAY View

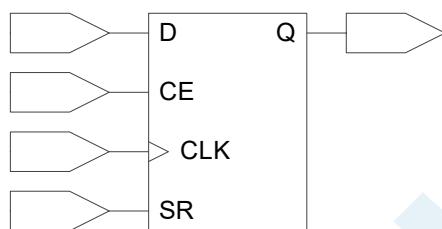

There are three ways to control the delay:

- Static control.
- Dynamic control, which can be combined with logic function circuits to achieve dynamic delay adjustment.
- Adaptive control.

I/O Register

See [Figure 2-13](#) for the I/O Register diagram. Each I/O provides an input register (IREG), an output register(OREG), and a tristate Register(TRIREG).

Figure 2-13 Diagram of I/O registers

Note!

- CE can be either active low (0: enable) or active high (1: enable).
- CLK can be either rising edge trigger or falling edge trigger.
- SR can be either synchronous/asynchronous SET or RESET or disable.
- The registers can be programmed as registers(DFFs) or latches.

DES and SER

GW5A series of FPGA Products support serialization and deserialization of various ratios, as listed in [Table 2-6](#).

Table 2-6 GW5A series of FPGA Products Serialization/Deserialization

Input/output	Ratios Supported
Input Logic	1:2 / 1:4 / 1:7 / 1:8 / 1:10 / 1:14 / 1:16 / 1:32
Output Logic	2:1 / 4:1 / 7:1 / 8:1 / 10:1 / 16:1 / 14:1 ^[1]

Note!

GW5A-138 does not support 14:1.

2.3.3 I/O Logic Modes

The I/O Logic supports multiple modes. In each operation, the I/O (or I/O differential pair) can be configured as output, input, and INOUT or tristate output (output signal with tristate control).

For further details about the I/O logic modes, please refer to [UG304, Arora V Programmable IO \(GPIO\) User Guide](#).

2.4 Block SRAM (BSRAM)

2.4.1 Introduction

GW5A series of FPGA Products provide abundant block SRAM resources. These memory resources are distributed throughout the FPGA array in rows. Therefore, they are

called block static random access memories (BSRAMs). There are five operation modes: Single Port mode, Dual Port mode, Semi Dual Port mode, Semi Dual Port mode with ECC function, and ROM mode.

An abundance of BSRAM resources provide a guarantee for the user's high-performance design. BSRAM's features:

- The capacity of a BSRAM is 18 Kbits, can be configured up to 36 Kbits
- Clock frequency up to 380MHz
- Supports Single Port mode
- Supports Dual Port mode
- Supports Semi Dual Port Mode
- Supports Semi-Dual Port mode with ECC function, provides ECC detection and error correction function
- Supports ROM Mode
- Data width up to 72bits
- Supports byte-enable
- Dual Port and Semi-dual Port support independent clocks and independent data width
- Read mode supports Register Output and Bypass Output
- Write mode supports Normal and Write-Through
- Input registers support synchronous writes

2.4.2 Configuration Mode

BSRAMs in the products support various data widths. See [Table 2-7](#).

Table 2-7 Memory Size Configuration

Capacity	Single Port Mode	Dual Port Mode	Semi Dual Port Mode	Semi Dual Port Mode with ECC Function	Read Only Mode
16 Kbits	16K x 1	16K x 1	16K x 1	–	16K x 1
	8K x 2	8K x 2	8K x 2	–	8K x 2
	4K x 4	4K x 4	4K x 4	–	4K x 4
	2K x 8	2K x 8	2K x 8	–	2K x 8
	1K x 16	1K x 16	1K x 16	–	1K x 16
	512 x 32	–	512 x 32	–	512 x 32
18 Kbits	2K x 9	2K x 9	2K x 9	–	2K x 9
	1K x 18	1K x 18	1K x 18	–	1K x 18
	512 x 36	–	512 x 36	–	512 x 36
36 Kbits ^[1]	–	–	–	512 x 72	–

Note!

[¹¹]25K devices do not support Semi Dual Port Mode with ECC Function.

For more information on Single Port mode, Dual Port mode, Semi-Dual Port mode, Semi-Dual Port with ECC Function, and ROM mode, please refer to [UG300, Arora V BSRAM & SSRAM User Guide](#).

2.4.3 ECC

The BSRAM has a built-in ECC hardcore module, which is mainly used for data detection and correction during data transfer and storage. The features are as follows:

- ECC error detection and correction only supported in SDP 512 x 64 mode
- Supports 1-bit error correction and 2-bit error alarm in 64-bit SRAM data
- 72-bit ECC module contains 64-bit data bits and 8-bit parity bits;
- Bit 31 and bit 63 support 1-bit and 2-bit error injection

2.5 DSP

GW5A series of FPGA Products provide brand new DSP resources. This DSP solution can meet user demands for high performance digital signal processing design, such as FIR, FFT, etc. The DSP blocks have the advantages of stable timing performance, high resource utilization, and low power consumption.

The features of DSP are as follows.

- Multiplier with three widths: 12X12, 27X18, 27X36
- 26-bit pre-adder
- 48-bit ALU
- Supports Shift function
- Multiple multipliers can achieve multiply of larger data widths by cascading
- Supports accumulation, multiplication and addition of 27X18 multipliers
- Supports the accumulation after summation of two 12X12 multipliers
- Supports the pipeline and bypass functions of registers
- All operands for arithmetic operation are signed numbers

Each DSP consists of three stages:

- PADD
- MULT
- Arithmetic Logic Unit

2.5.1 PADD

Each DSP features one PADD(pre-adder) for implementing pre-addition, pre-subtraction, and shifting.

PADD locates at the first stage with two inputs:

- 26-bit input C;
- Parallel 26-bit input A or SIA.

Each input end supports pipeline mode and bypass mode.

2.5.2 MULT

Each DSP block has one 27×18 multiplier M0 and one 12×12 multiplier M1. The multipliers are located after the pre-adders to implement multiplication operations, and both the inputs and outputs support register mode and bypass mode.

Multiplier M0 can be configured as:

- One 27×18 multiplier
- One 12×12 multiplier
- Two DSPs can form a 27×36 multiplier

Multiplier M1 can only be configured as one 12×12 multiplier.

When multiplier M0 and multiplier M1 are both configured as a 12×12 multiplier and the ALU is enabled, 12×12 SUM mode can be achieved.

2.5.3 Arithmetic Logic Unit

Each Macro has one four-input 48-bit ALU, which can further enhance MULT's functions. Register mode and bypass mode are supported both in the inputs and outputs. The ALU supports the addition/subtraction operations of multiplier M0 output, multiplier M1 output(48-bit operand D), ALU cascade input CASI and ALU output feedback, or static PRE_LOAD value.

2.5.4 Operating Mode

Multiple operation modes of the DSP can be realized by control signals. Operation Modes:

- Multiplier
- Accumulator
- MULTADDALU

2.6 MIPI D-PHY

2.6.1 Hardcore MIPI D-PHY RX/TX

The dedicated MIPI D-PHY core supports MIPI DSI and CSI-2 mobile video interfaces for cameras and displays. The main features of the FIFO IP are as follows:

- In line with *MIPI Alliance Standard for D-PHY Specification*, version 1.2;
- Unidirectional HS (High-speed) mode at up to 2.5 Gbps per lane and 10 Gbps per quad (4 data lanes). Up to 20 Gbps supported by each chip (8 data lanes).
- Supports two MIPI D-PHY quads, up to 4 data lanes and one clock lane for each quad.
- Bidirectional Low-power (LP) mode with a bit rate of 10Mbps.
- Built-in HS Sync, bit alignment in the lane (Word Alignment) and word alignment between lanes (Lane Alignment).
- MIPI D-PHY RX supports 1:8 mode and 1:16 mode.
- GW5A-25 and GW5A-60 MIPI D- PHY TX supports 8:1 mode and 16:1 mode.
- Supports MIPI DSI and MIPI CSI-2 link layers.
- A dedicated MIPI Bank for the hardcore MIPI D-PHY.

For more information on Gowin MIPI D- PHY RX, please refer to [UG296, Arora V Hardened MIPI D-PHY User Guide](#).

2.6.2 GPIOs Support MIPI D-PHY RX/TX (MIPI IO)

The GPIOs of GW5A series of FPGA Products support MIPI IO mode. The MIPI D-PHY RX/TX implemented by using MIPI IO mode supports MIPI DSI and CSI-2 interfaces for cameras and displays in both transmitting and receiving modes. MIPI D-PHY provides a physical layer definition. The MIPI IO mode support is as listed in [Table 1](#).

Table 2-8 GW5A series of FPGA Products MIPI IO Mode Support List

Device	MIPI RX	MIPI TX
GW5A-25	All Banks (except JTAG bank and Reserved Bank)	All Banks (except JTAG bank and Reserved Bank)
GW5A-60	All Banks (except JTAG Bank)	All Banks (except JTAG Bank)
GW5A-138	All Banks	–

The main features are as follows:

- In line with *MIPI Alliance Standard for D-PHY Specification*, version 1.2;
- High Speed RX and TX interfaces with RX transfer rates up to 1.5 Gbps per MIPI lane and TX transfer rates up to 1.6 Gbps per MIPI lane.
- Supports unidirectional High-speed (HS) mode

- Supports bidirectional Low-power operation mode
- Deserializes and serializes high-speed data into byte data packets
- Supports MIPI D-PHY TX 8:1 mode and 16:1 mode
- Supports MIPI D-PHY RX 1:8 mode and 1:16 mode
- Supports IO Types of ELVDS, TLVDS, and MIPI IO
- Control data is transmitted in LP mode at a data rate of 10 Mb/s.

For more detailed information, please refer to [IPUG948E, MIPI D-PHY RX TX Advance User Guide](#).

2.7 MIPI C-PHY

2.7.1 Hardcore MIPI C-PHY

The GW5A-60 products offer the hard-core MIPI C-PHY RX and TX, featuring highly efficient data transfer rates, and is primarily suitable for high-speed serial interfaces between cameras and image processors.

- MIPI Alliance Standard for C-PHY Specification, Version 1.2.
- One MIPI Quad supports up to 3-trios data lanes
- MIPI C-PHY RX/TX support up to 2.5 Gsps data rate per lane
- MIPI C-PHY RX supports high-speed mode and automatic interrupt control..
- MIPI C-PHY TX supports high-speed mode.
- Bidirectional Low mode with data rates up to 10Mbps.
- High speed RX mode supports De-skew function.
- RX supports a linear equalizer with a maximum Delta peak > 8dB.
- Supports ALP mode (optional).

2.7.2 GPIOs Support MIPI C-PHY RX/TX (MIPI IO)

The GPIOs of GW5A-25 and GW5A-60 support MIPI C-PHY IO mode, and MIPI C-PHY RX/TX can be realized by MIPI C-PHY IO mode.

The main features are as follows:

- MIPI Alliance Standard for C-PHY Specification, Version 1.2.
- Supports 3-trios data lanes
- Supports MIPI C-PHY RX
- Supports MIPI C-PHY TX

2.8 ADC

2.8.1 ADC

GW5A-138 and GW5A-25 devices integrate eight-channel 10 bits Delta-sigma ADC. It is an ADC with low power, low-leakage current, and high dynamic performance.

Combined with the programmable logic capability of the FPGA, and the integrated voltage and temperature sensing unit, the ADC can meet the internal temperature and power monitoring and data collection requirements. At the same time, the FPGA provides rich and free configurable GPIO interfaces and ADC analog signal interfaces to connect to the voltage channel of the ADC, which can meet the voltage data collection and monitoring requirements outside the chip.

The main features are as follows:

- Number of ADCs for 25K devices: 1
- Number of ADCs for 138K devices: 2
- Reference voltage source: Built-in
- Bit width accuracy: 10 bits
- Sampling Clock: < 2MHz
- ADC unipolar input voltage: 0~1V
- 60dB SNR
- Temperature sensor accuracy: +/-2°C
- Voltage sensor accuracy: +/-5mV

For more information on ADC, see [UG299, Arora V ADC User Guide](#).

2.8.2 SARADC

GW5A-60 integrates a SARADC. SARADC is a 13bit ADC for high-speed signal sampling, which is capable of meeting high-precision reference voltage requirements, and is usually used in scenarios requiring high precision. The main features are as follows:

- Reference voltage source: Built-in/Off-chip
- Bit width accuracy: 13 bits
- Sampling Clock: 10MHz~ 300MHz
- Single-ended input signal range: 0V -1V
- Differential signal range: -1V ~ 1V
- Voltage sensor accuracy: +/-0.2mV

2.9 Clock

The clock resources and wiring are critical for high-performance applications in FPGA.GW5A series of FPGA Products provide the global clock network (GCLK) which connects to all the registers directly. In addition to the GCLK, PLL, HCLK, DDR memory interface, and DQS, etc. are also provided.

Figure 2-14 138K Clock Resources

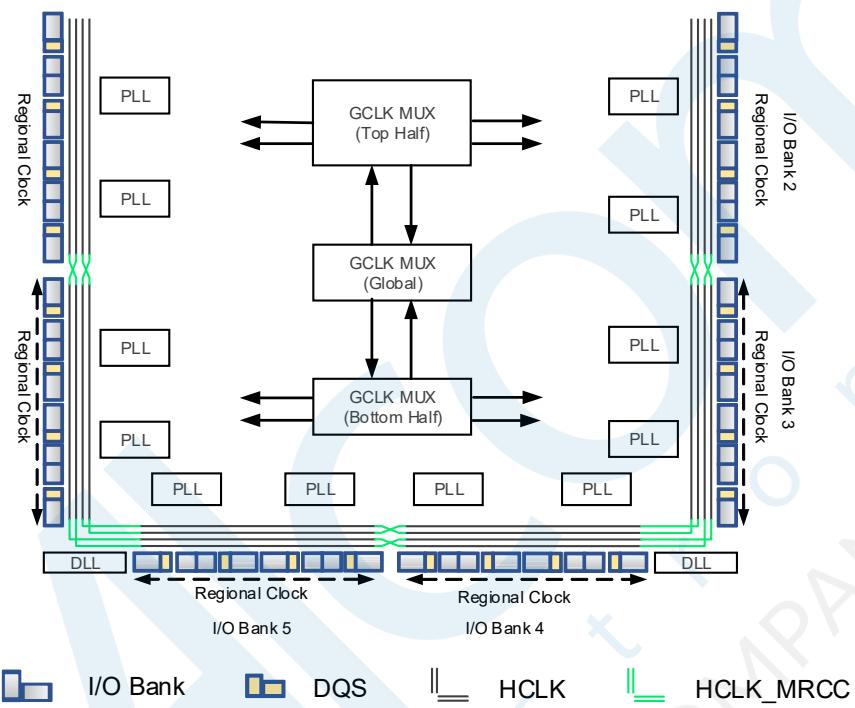

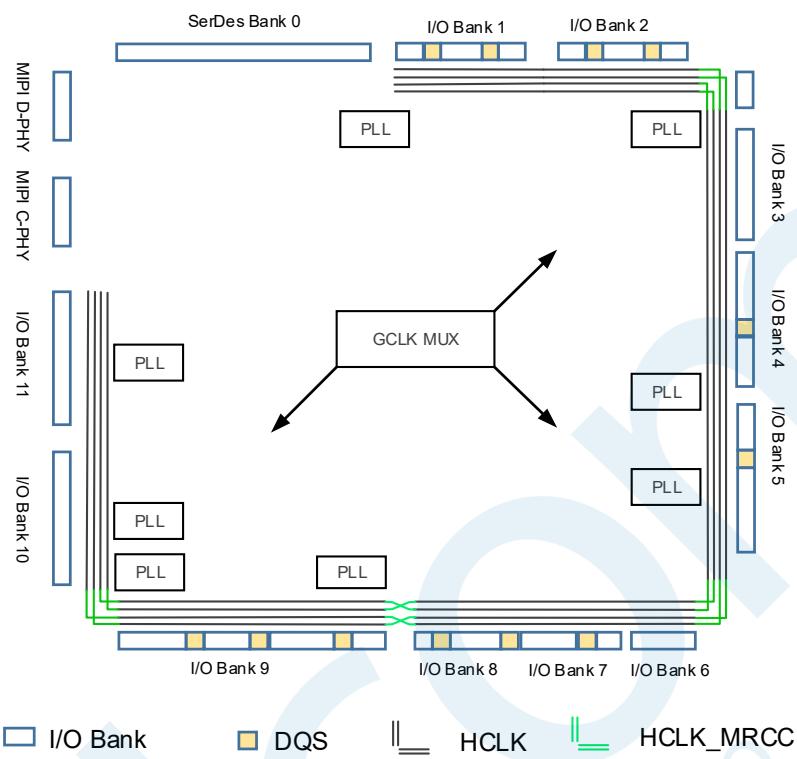

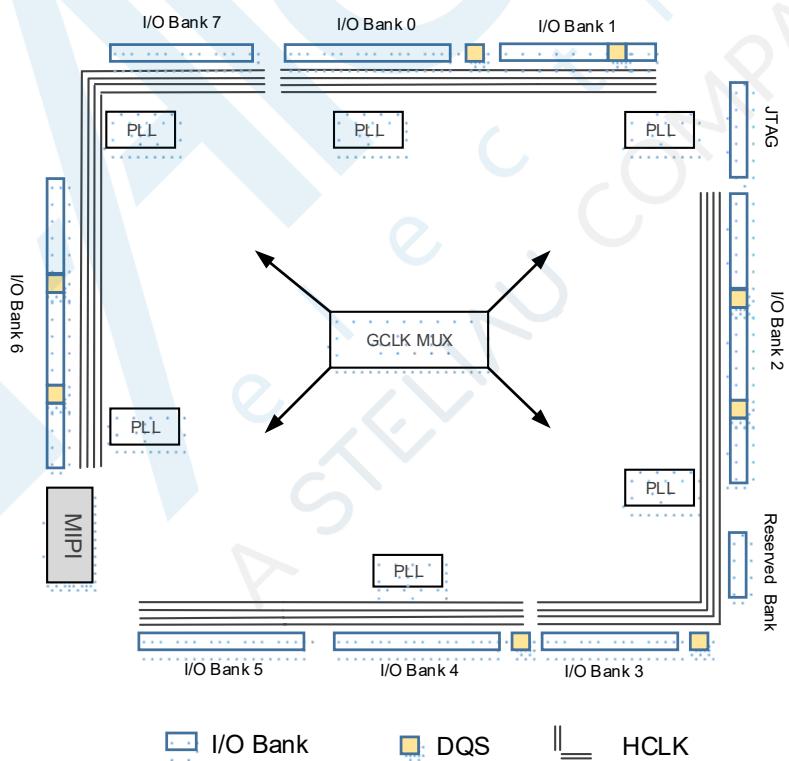

Figure 2-15 60K Clock Resources**Figure 2-16 25K Clock Resources**

Please refer to the following sections for a brief introduction. For further detailed information on the GCLK, HCLK, DDR memory interface, and DQS, see [UG306, Arora V Clock User Guide](#).

2.9.1 Global Clock

GW5A series of FPGA Products provide 16 global clocks. The clock source of GCLK comes from dedicated clock pins, PLL outputs, SerDes clocks, HCLK outputs, and common routing resources. Using a dedicated clock input pin provides better clock performance and enables the global driving.

2.9.2 High-speed Clock

HCLK is the high-speed clock with low jitter and low skew. It can support high-performance data transfer and is mainly suitable for source synchronous data transfer protocols. One bank supports 4 HCLKs, as shown in [Figure 2-17](#), [Figure 2-18](#), [Figure 2-19](#).

Figure 2-17 138K HCLK View

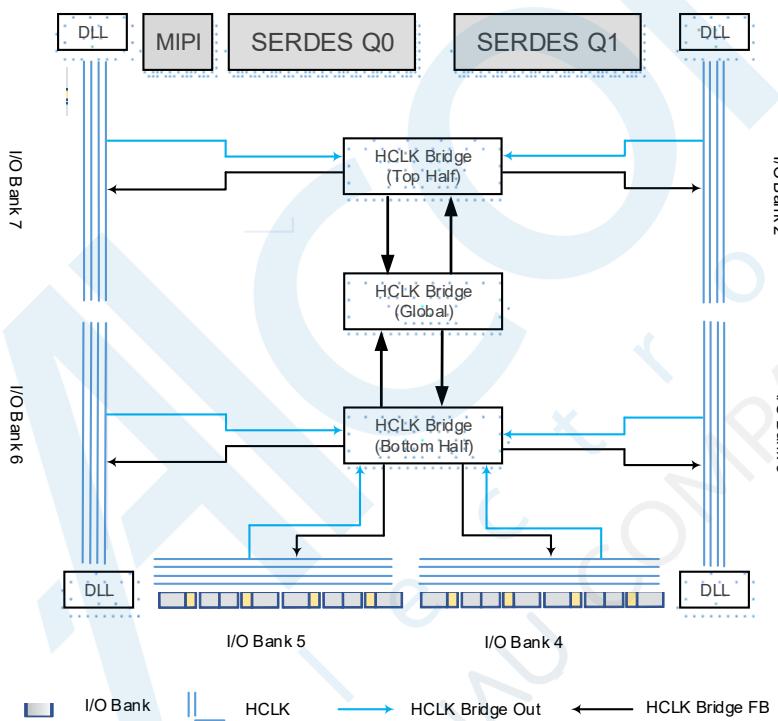

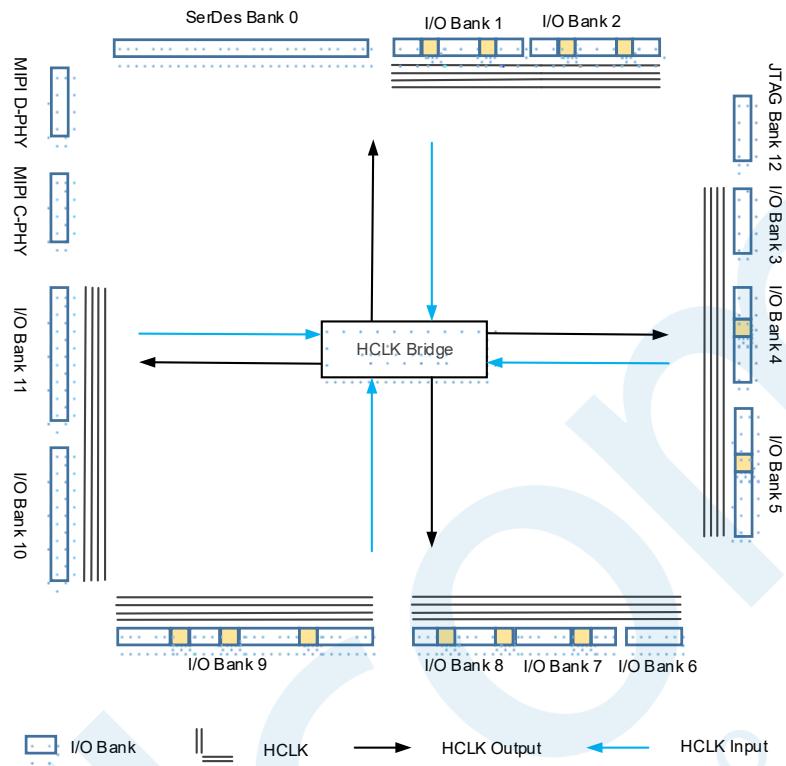

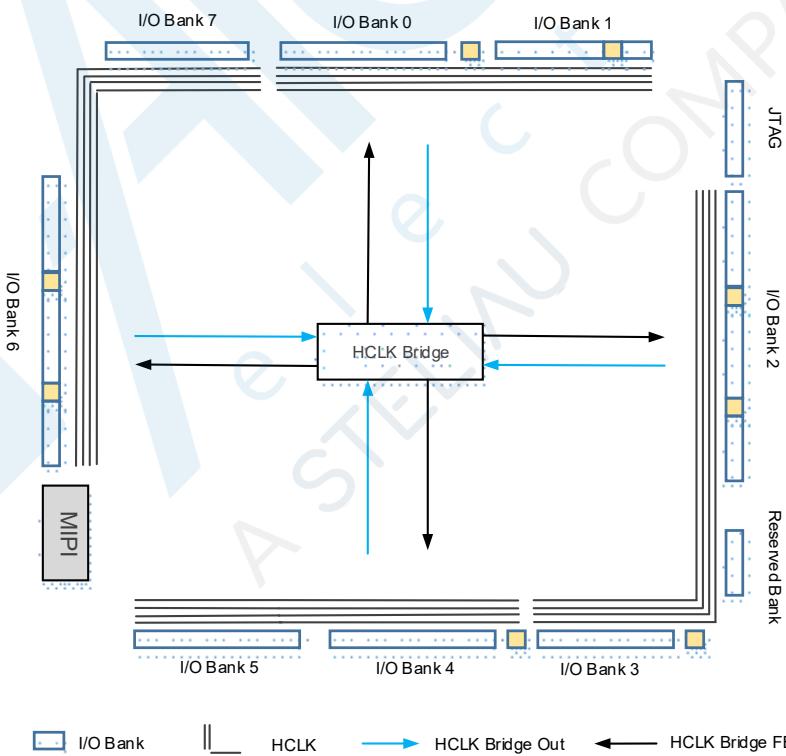

Figure 2-18 60K HCLK View**Figure 2-19 25K HCLK View**

HCLK can provide user with the function modules as follows:

- Dynamic high-speed clock enable module. Able to dynamically turn on/off the high-speed clock signal.
- High speed clock frequency division module, generating a divided clock of the input clock. Used in the IO logic mode.
- Dynamic high speed clock selector.
- Dynamic delay adjustment module, producing the clock signal for the dedicated clock pin input.
- HCLK Bridge, able to send HCLK clock signals to any of the Banks. In addition, the HCLK clock signal can span to the clock tree of the adjacent IO Bank after entering from the IO Bank.

Note!

For high speed signals of the same source, it is recommended to put them in the same IO Bank to achieve a minimum skew between signals.

2.9.3 Phase-locked Loop

PLL (Phase-locked Loop) is one kind of a feedback control circuit. The frequency and phase of the internal oscillator signal is controlled by the external input reference clock.

The PLL module can provide synthesizable clock frequencies. Frequency adjustment (multiply and division), phase adjustment, and duty cycle adjustment can be achieved by configuring the parameters.

The PLL features are as follows:

- Supports seven clock outputs
- Integer PLL, the first clock output and feedback clock output support 1/8 fractional output division
- Supports phase shift and duty cycle adjustment
- Frequency Lock detection
- Supports spread spectrum clock generation(IP required)
- VCO frequency range: 800 MHz ~ 2000 MHz
- CLKIN frequency range: 19 MHz ~ 800 MHz.

2.9.4 DDR Memory Interface Clock Management DQS

The DQS module of the products provides the following features to support the clock requirements of the DDR memory interface:

- Receive DQS input, sort out waveform and shift 1/4 phase
- Provide a read/write pointer for the input buffer
- Provide valid data for internal logic
- Provide DDR output clock signal
- Support DDR3 write voltage control

The DQS module supports multiple operating modes to meet the needs of different I/O interfaces.

2.9.5 Long Wire

As an effective complement to CRUs, GW5A series of FPGA Products provide flexible and rich long-wire (LW) resources. LW can be used as a control wire to provide clock enable (CE) for DFF, set/reset signal; it can also be used as logic winding and as a common data signal.

2.10 Global Set/Reset (GSR)

A global set/rest (GSR) network is built in the product. There is a direct connection to core logic. It can be used as asynchronous/synchronous set. The registers in CFU and I/O can be individually configured to use GSR.

2.11 Programming & Configuration

GW5A series of FPGA Products support SRAM configuration. Each time the device is powered on, the bitstream needs to be downloaded to configure the device. You can also save the configuration data in an external Flash. After power-up, the devices load configuration data from the external Flash into the SRAM.

Besides JTAG, the devices also support GowinCONFIG configuration modes: SSPI, MSPI, Master CPU, Slave CPU, Master SERIAL, Slave SERIAL, and PCIe. The FPGAs also support background programming, datastream file encryption and security bit setting, SEU detection and error correction, and OTP.

For more detailed information, please refer to:

- [UG704E, Arora V 138K&75K FPGA Products Programming and Configuration User Guide](#)
- [UG718E, Arora V 60K FPGA Products Programming and Configuration User Guide](#)
- [UG714E, Arora V 25K FPGA Products Programming and Configuration User Guide](#)

2.11.1 Background Upgrade

The products support background upgrade by JTAG/SSPI/QSSPI or using the goConfig I2C IP/goConfig JTAG IP, that is, the device supports programming the embedded Flash or the external Flash without affecting the existing working state, the device can work normally according to the original configuration during the programming process. After the programming is completed, trigger RECONFIG_N with a low level or use “Reboot” to complete the online upgrade. This feature applies to the applications requiring long online time and irregular upgrades.

2.11.2 Bitstream File Encryption & Security Bit Setting

GW5A series of FPGA Products support bitstream data encryption with 128-bit AES encryption algorithm. At the same time, GOWINSEMI adds CRC and sets security bits in the bitstream file of FPGA products by default in order to guarantee the safe and accurate transmission of configuration data. During the data configuration process, the input data is verified in real time for errors, and the device cannot be woken up by incorrect data. After the configuration of the bitstream with security bit is complete, data readback cannot be performed.

2.11.3 SEU Handler

The SEU Handler module integrated features Configuration Memory Soft Error Recovery (CMSER). It detects the possible soft errors by continuously monitoring the configuration memory and attempts to correct them within its capabilities. While the FPGA is working, it reads the configuration data frame by frame from the background and performs ECC decoding and CRC checksum comparison to detect errors. If the error can be corrected, the calculated error-corrected data bits are rewritten to the SRAM.

The SEU Handler module functions and features are as follows:

- Based on ECC and CRC detection and correction algorithms
- CRC can report any number of bit errors during configuration of the SRAM.
- ECC supports 2-bit error location report and error correction^[1] and 4-bit error alarm in each SRAM Frame. 138K devices support 1-bit error location report and error correction and 2-bit error alarm in each 64-bit SRAM Frame.

Note!

^[1] SEU Handler can support faster error correction. Please contact local technical support for details.

- Can be enabled or disabled by user logic or enabled automatically upon program wakeup
- Supports single bit error injection by user logic for the functional verification and evaluation.

2.11.4 OTP

GW5A series of FPGA Products provide a 128-bit OTP space and support one-time programming. Bit0 ~ Bit31 is the user space, which can be used to store security and other important information. Bit32~Bit95 is the DNA space, which stores the 64-bit unique identification information of the device.

2.12 On Chip Oscillator

There is an internal oscillator in each of the products. During the configuration process, it can provide a clock for the MSPI mode. The on-chip oscillator also provides a clock

resource for user designs. Up to 64 clock frequencies can be obtained by setting the parameters. The following formula is employed to get the output clock frequency:

$$f_{\text{out}} = 210 \text{MHz}/\text{Param}$$

Note!

“Param” is the configuration parameter. It is 3 or an even number between 2 and 126.

3 AC/DC Characteristics

Note!

Ensure that GOWINSEMI products are always used within recommended operating conditions and range. Data beyond the working conditions and range are for reference only. GOWINSEMI does not guarantee that all devices will operate as expected beyond the standard operating conditions and range.

3.1 Operating Conditions

3.1.1 Absolute Max. Ratings

GW5A-138

Table 3-1 Absolute Max. Ratings (138K)

Name	Description	Min.	Max.
FPGA Logic			
V _{CC}	Core voltage	-0.5V	1.05V

Temperature			
T _{JCOM}	Junction temperature Commercial operation	0°C	+85°C
T _{JIND}	Junction temperature Industrial operation	-40°C	+100°C

Note!

- ^[1] The greater the V_{CC_LDO} voltage, the higher the power consumption.
- ^[2] When eFuse is not required, this power supply can be either connected to GND or floating.
- If multiple power supplies are shorted on some packages or PCBs, it is necessary to take the intersection of the ranges of all shorted power supplies to satisfy the needs of multiple power supplies at the same time.

GW5A-60

Table 3-5 Recommended Operating Conditions (60K)

Name	Description	Min.	Max.
FPGA Logic			
V_{CC}	Core voltage, LV	0.87V	1.03V
	Core voltage, EV	1.14V	1.8V
V_{CCIO}	I/O Bank voltage	1V	3.465V
$V_{CCX}^{[1]}$	Auxiliary voltage	1.71V	3.465V
$V_{EFUSE}^{[2]}$	Voltage required for eFuse writing	1.62V	1.98V
Gigabit Transceiver			
$V_{DDHA_Q^*}$	Analog high power supply	1.71V	1.89V
V_{DDAQ^*}	Analog core power supply	0.87V	1.03V
$V_{DDT_Q^*}$	TX power supply	0.87V	1.03V
$V_{DDD_Q^*}$	Digital core power supply	0.87V	1.03V
MIPI			
V_{DDA_MIPI}	Analog core power supply	0.87V	1.08V
V_{DDX_MIPI}	Analog auxiliary power supply	1.71V	3.465V
V_{DDD_MIPI}	Digital core power supply	0.87V	1.08V
V_{DD12_MIPI}	MIPI LP power supply	1.14V	1.32V
ADC			
V_{CC_ADC}	ADC power supply	1.62V	1.98V

I_{PD}	I/O Active Pull-down Current	$V_{IL}(\text{MAX}) < V_{IN} < V_{CCIO}$, Pull Strength=Strong	-		400uA
		$V_{IL}(\text{MAX}) < V_{IN} < V_{CCIO}$, Pull Strength=Medium			150uA
		$V_{IL}(\text{MAX}) < V_{IN} < V_{CCIO}$, Pull Strength=Weak			50uA
C1	I/O Capacitance			5 pF	8pF
V_{HYST}	Hysteresis for Schmitt Trigger inputs	$V_{CCIO}=3.3V$, Hysteresis=ON	-	400mV	
		$V_{CCIO}=2.5V$, Hysteresis=ON	-	250mV	
		$V_{CCIO}=1.8V$, Hysteresis=ON	-	150mV	
		$V_{CCIO}=1.5V$, Hysteresis=ON	-	130mV	
		$V_{CCIO}=1.2V$, Hysteresis=ON		40mV	

Table 3-16 DC Electrical Characteristics - Recommended Operating Conditions(25K)

Name	Description	Condition	Min.	Typ.	Max.
I_{IL}, I_{IH}	Input or I/O leakage	$V_{CCIO} < V_{IN} < V_{IH} (\text{MAX})$	-		210uA
		$0V < V_{IN} < V_{CCIO}$	-		10uA
I_{PU}	I/O Active Pull-up Current	$0 < V_{IN} < 0.7V_{CCO}$, Pull Strength=Strong	-		-400uA
		$0 < V_{IN} < 0.7V_{CCO}$, Pull Strength=Medium			-150uA
		$0 < V_{IN} < 0.7V_{CCO}$, Pull Strength=Weak			-50uA

Name	Description	Condition	Min.	Typ.	Max.
I_{PD}	I/O Active Pull-down Current	$V_{IL(MAX)} < V_{IN} < V_{CCIO}$, Pull Strength=Strong	-		400uA
		$V_{IL(MAX)} < V_{IN} < V_{CCO}$, Pull Strength=Medium			150uA
		$V_{IL(MAX)} < V_{IN} < V_{CCO}$, Pull Strength=Weak			50uA
C1	I/O Capacitance			5pF	8pF
V_{HYST}	Hysteresis for Schmitt Trigger inputs	$V_{CCIO}=3.3V$, Hysteresis=ON	-	400mV	
		$V_{CCIO}=2.5V$, Hysteresis=ON	-	250mV	
		$V_{CCIO}=1.8V$, Hysteresis=ON	-	150mV	
		$V_{CCIO}=1.5V$, Hysteresis=ON	-	130mV	
		$V_{CCIO}=1.2V$, Hysteresis=ON		40mV	

3.3.2 Static Current

GW5A-138

Table 3-17 Static Current (138K)

Name	Description	LV/UV	Typ. ^[1]
I_{CC}	Core Current	LV version	100 mA
I_{CCX}	V_{CCX} current ($V_{CCX}=1.8V$)	LV version	9 mA
I_{CCIO}	I/O Bank current ($V_{CCIO}=2.5V$)	LV version	5 mA
I_{CC_LDO}	Static Current (Built-in Regulator)	LV version	6 mA

Note!

^[1] The test condition for the typical value is 25°C.

GW5A-60

Table 3-18 Static Current (60K)

Name	Description	LV/UV	Typ. ^[1]
I_{CC}	Core current	LV version	80 mA
I_{CCX}	V_{CCX} current	LV version	5 mA
I_{CCIO}	I/O Bank current ($V_{CCIO}=3.3V$)	LV version	1 mA

Note!

^[1] The test condition for the typical value is 25°C.

GW5A-25

Table 3-19 Static Current (25K)

Name	Description	LV/UV	Typ. ^[1]
I _{CC}	Core current	LV version	30mA
I _{CCX}	V _{CCX} current	LV version	2mA
I _{CCIO}	I/O Bank current (V _{CCIO} =2.5V)	LV version	1mA
I _{CC_LDO}	Static Current (Built-in Regulator)	LV version	4mA

Note!

^[1] The test condition for the typical value is 25°C.

3.3.5 Differential I/O DC Characteristic

GW5A-138

Table 3-23 Differential I/O DC Characteristics (138K)

Name	Description	Conditions	Min.	Typ.	Max.	Unit
V_{ICM}	Input Common Mode Voltage	Half the Sum of the Two Inputs	0.05		1.8	V

Name	Description	Conditions	Min.	Typ.	Max.	Unit
V_{ID}	Differential Input Threshold	Difference Between the Two Inputs	± 100	± 350	± 600	mV
I_{IN}	Input Current	Power On or Power Off			20	μA
V_{OD}	Output Voltage Differential	$(V_{OP} - V_{OM})$, $R_T = 100\Omega$	250	350	600	mV
ΔV_{OD}	Change in VOD Between High and Low				50	mV
V_{OS}	Output Voltage Offset	$(V_{OP} + V_{OM})/2$, $R_T = 100\Omega$	1.000	1.250	1.425	V
ΔV_{OS}	Change in VOS Between High and Low				50	mV
I_S	Short-circuit current	$V_{OD} = 0V$ Two outputs shorted			12	mA

GW5A-60/GW5A-25

Table 3-24 Differential I/O DC Characteristic

Name	Description	Conditions	Min.	Typ.	Max.	Unit
V_{ICM}	Input Common Mode Voltage	Half the Sum of the Two Inputs	0.3		2.35	V
V_{ID}	Differential Input Threshold	Difference Between the Two Inputs	± 100	± 350	± 600	mV
I_{IN}	Input Current	Power On or Power Off	--	--	20	μA
V_{OD}	Output Voltage Differential	$(V_{OP} - V_{OM})$, $R_T = 100\Omega$	250	350	600	mV
ΔV_{OD}	Change in VOD Between High and Low		--	--	50	mV
V_{OS}	Output Voltage Offset	$(V_{OP} + V_{OM})/2$, $R_T = 100\Omega$	1.125	1.25	1.375	V
ΔV_{OS}	Change in VOS Between High and Low		--	--	50	mV
I_S	Short-circuit current	$V_{OD} = 0V$ output short-circuit	--	--	12	mA

3.4 AC Switching Characteristics

3.4.1 CFU Switching Characteristic

Table 3-25 CFU Timing Parameters

Name	Description	-2		-1		Unit
		Min	Max	Min	Max	
t_{LUT4_CFU}	LUT4 delay	0.297	0.539	0.371	0.674	ns
t_{SR_CFU}	Set/Reset to Register output	1.075	1.148	1.344	1.435	ns
t_{CO_CFU}	Clock to Register output	0.200	0.230	0.250	0.288	ns

3.4.2 BSRAM Switching Characteristic

Table 3-26 BSRAM Timing Parameters

Name	Description	-2		-1		Unit
		Min	Max	Min	Max	
t_{COAD_BSRAM}	Clock to read address / data output	1.1	1.47	1.375	1.838	ns
t_{COOR_BSRAM}	Clock to Register output	0.23	0.326	0.288	0.408	ns

3.4.3 DSP Switching Characteristics

Table 3-27 DSP Timing Parameters

Name	Description	-2		-1		Unit
		Min	Max	Min	Max	
t_{COIR_DSP}	Clock to output from input register	0.2	0.22	0.24	0.25	ns
t_{COPR_DSP}	Clock to output from pipeline register	0.06	0.07	0.07	0.08	ns
t_{COOR_DSP}	Clock to output from output register	0.03	0.04	0.04	0.04	ns

3.4.4 Gearbox Switching Characteristics

Table 3-28 Gearbox Timing Parameters

Name	Description	Max.	Unit
$FMAX_{IDDR}$	1:2 Gearbox maximum serial input rate	400	Mbps
$FMAX_{IDES4}$	1:4 Gearbox maximum serial input rate	800	Mbps
$FMAX_{IDESx}$	1:8/1:10 Gearbox maximum serial input rate	1500	Mbps
$FMAX_{IDES14}$	1:14 Gearbox maximum serial input rate	1500	Mbps
$FMAX_{IDES16}$	1:16 Gearbox maximum serial input rate	1500	Mbps
$FMAX_{IDES32}$	1:32 Gearbox maximum serial input rate	1500	Mbps

Name	Description	Max.	Unit
FMAX _{IDDR}	2:1 Gearbox maximum serial output rate	400	Mbps
FMAX _{OSEN4}	4:1 Gearbox maximum serial output rate	800	Mbps
FMAX _{OSENx}	8:1/10:1 Gearbox maximum serial output rate	1500	Mbps
FMAX _{OSENx}	8:1/10:1 Gearbox maximum serial output rate	1500	Mbps
FMAX _{OSEN16}	16:1 Gearbox maximum serial output rate	1500	Mbps

3.4.5 On chip Oscillator Switching Characteristics

Table 3-29 On chip Oscillator Switching Characteristics

Name	Description	Min.	Typ.	Max.
f_{MAX}	Output Frequency (0 to + 85°C)	199.5 MHz	210 MHz	220.5 MHz
	Output Frequency (-40 to +100°C)	189 MHz	210 MHz	231 MHz
t_{DT}	Output Clock Duty Cycle	-	50%	-

3.4.6 PLL Switching Characteristics

Table 3-30 PLL Switching Characteristic

Parameter	Description	Speed Grade		Unit	Note
		-1	-2		
F_{INMAX}	Maximum Input Clock Frequency	800	800	MHz	
F_{INMIN}	Minimum Input Clock Frequency	19	19	MHz	
F_{PFDMAX}	Maximum Frequency at the Phase Frequency Detector	400	400	MHz	
F_{PFDMIN}	Minimum Frequency at the Phase Frequency Detector	19	19	MHz	
$F_{INJITTER}$	Maximum Input Clock Period Jitter	< 20% of clock input period or 1 ns Max			
F_{Induty}	Minimum Allowable Input Duty Cycle: 19- 49MHz	25	25	%	
	Minimum Allowable Input Duty Cycle: 50-199 MHz	30	30	%	
	Minimum Allowable Input Duty Cycle: 200-399 MHz	35	35	%	
F_{VCOMIN}	Minimum PLL VCO Frequency	800	800	MHz	
F_{VCOMAX}	Maximum PLL VCO Frequency	1600	1600	MHz	
F_{BW}	Low PLL Bandwidth at Typical	1	1	MHz	
	High PLL Bandwidth at Typical	4	4	MHz	

Parameter	Description	Speed Grade		Unit	Note
		-1	-2		
T _{STATPHAOFFSET}	Static Phase Offset of the PLL Outputs	+/- 50	+/-50	ps	
T _{JITTER_CCJ_HCLK}	PLL Output cycle-cycle Jitter Thru HCLK \geq 100MHz	<300	<300	ps	3
	PLL Output cycle-cycle Jitter Thru HCLK <100MHz	<30	<30	MUI	
	PLL Output cycle-cycle Jitter Thru PCLK \geq 100MHz	<400	<400	ps	
	PLL Output cycle-cycle Jitter Thru PCLK< 100MHz	<40	<40	MUI	
T _{JITTER_PJ_PCLK}	PLL Output period Jitter Thru HCLK \geq 100MHz	<300	<300	ps	
	PLL Output period Jitter Thru HCLK < 100MHz	<30	<30	MUI	
	PLL Output period Jitter Thru PCLK \geq 100MHz	<400	<400	ps	
	PLL Output period Jitter Thru PCLK< 100MHz	<40	<40	MUI	
T _{OUTDUTY}	PLL Output Clock Duty Cycle Precision	<50	<50	MUI	1,4
T _{LOCKMAX}	PLL Maximum Lock Time	1	1	ms	
F _{OUTMAX}	PLL Maximum Output Frequency	800	800	MHz	
F _{OUTMIN}	PLL Minimum Output Frequency	6.25	6.25	MHz	2
T _{EXTFDVAR}	External Clock Feedback Variation	< 20% of clock input period or 1 ns Max			
RST _{MINPULSE}	Minimum Reset Pulse Width	10	10	ns	

Note!

- This test data is derived from integer frequency divider outputs.
- In Cascade mode, multiple dividers can be serially connected to achieve a reduced output frequency.
- The level of output jitter correlates with the input source; this dataset is based on a low-jitter crystal as the source.
- The observed duty cycle on IOs is influenced by the Clock Tree.

3.5 MIPI D-PHY Switching Characteristics

Table 3-31 MIPI D-PHY RX Switching Characteristics

Speed Grade	Conditions	Fmin (Typical Voltage)	Fmax (Typical Voltage)	Unit
C1/C2	-	-	2.5	Gbps

Table 3-32 MIPI D-PHY TX Switching Characteristics

Speed Grade	Conditions	Fmin (Typical Voltage)	Fmax (Typical Voltage)	Unit
C1/C2	-	-	2.5	Gbps

3.6 MIPI C-PHY Switching Characteristics

Table 3-33 MIPI C-PHY RX Switching Characteristics

Speed Grade	Conditions	Fmin (Typical Voltage)	Fmax (Typical Voltage ¹)	Unit
C1	$V_{CC}=0.9V; V_{DDA_MIPI}=1.0V$	-	2	Gsps
	$V_{CC}=0.9V; V_{DDA_MIPI}=0.9V$	-	1.8	Gsps
C2	$V_{CC}=0.9V; V_{DDA_MIPI}=1.0V$	-	2.3	Gsps
	$V_{CC}=0.9V; V_{DDA_MIPI}=0.9V$	-	2	Gsps
C3	$V_{CC}=0.9V; V_{DDA_MIPI}=1.05V$	-	2.5	Gsps
	$V_{CC}=0.9V; V_{DDA_MIPI}=0.9V$	-	2.1	Gsps

Note!

[¹]Typical Voltages: $V_{CC}=0.9V; V_{DDA_MIPI}=0.9V; V_{DDX_MIPI}=1.8V; V_{DD12_MIPI}=1.2V$.

Table 3-34 MIPI C-PHY TX Switching Characteristics

Speed Grade	Conditions	Fmin (Typical Voltage)	Fmax (Typical Voltage)	Unit
C1/C2/C3	-	-	2.5	Gsps

3.7 Configuration Interface Timing Specification

GW5A series of FPGA Products support multiple GowinCONFIG configuration modes: SSPI, MSPI, Master CPU, Slave CPU, Master SERIAL, and Slave SERIAL. For further detailed information, please refer to [UG714, GW5A series of FPGA Products Programming and Configuration User Guide](#).

4 Ordering Information

4.1 Part Name

Figure 4-1 Part Naming Examples-ES

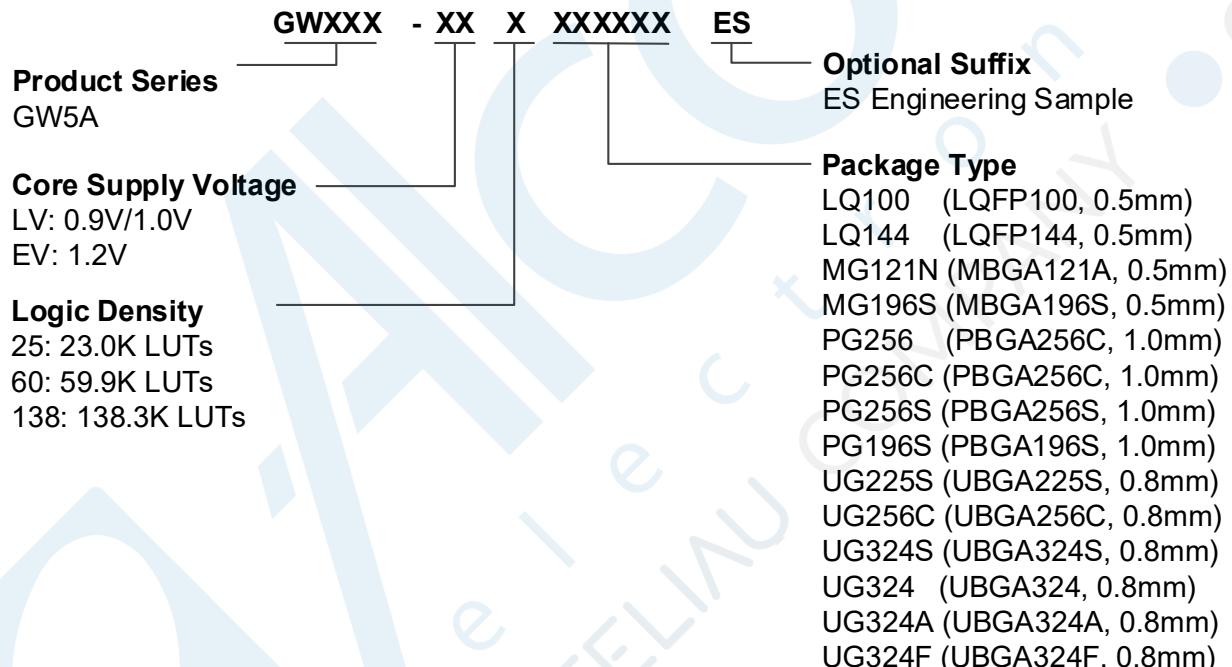

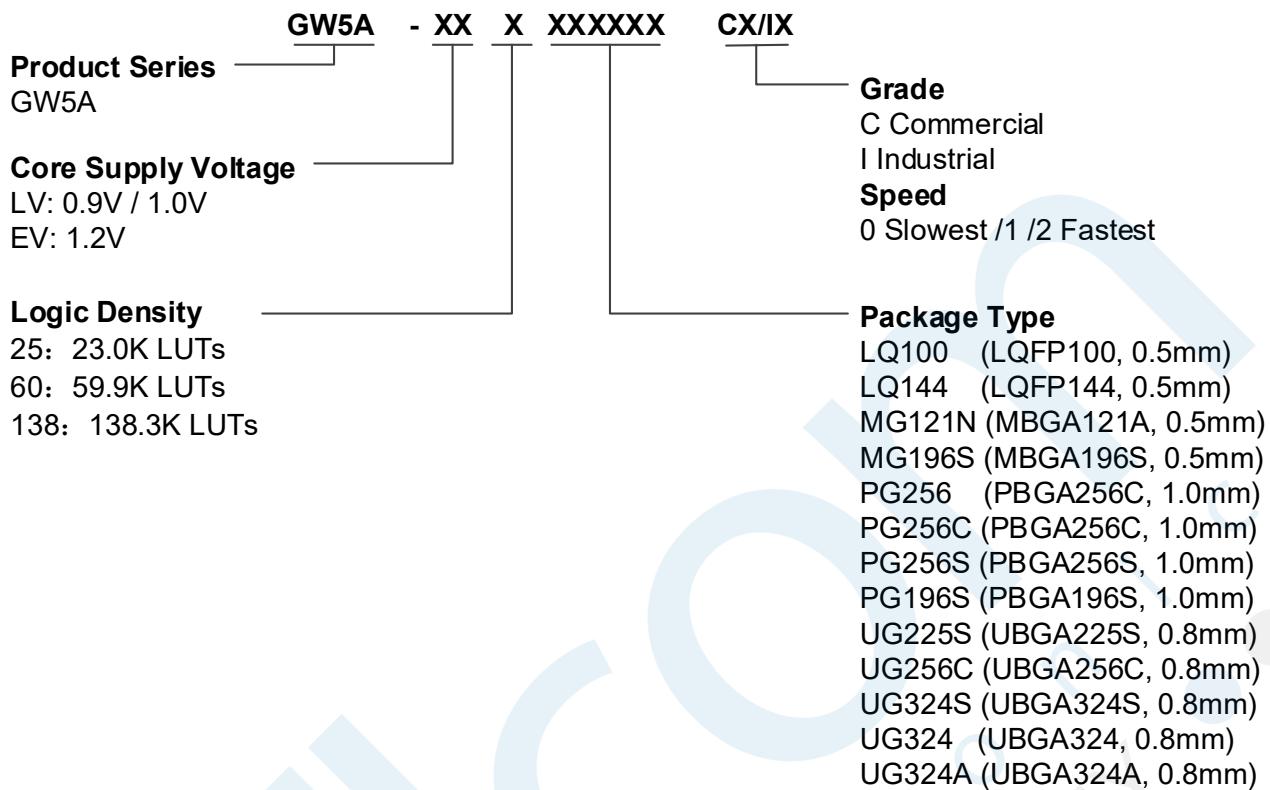

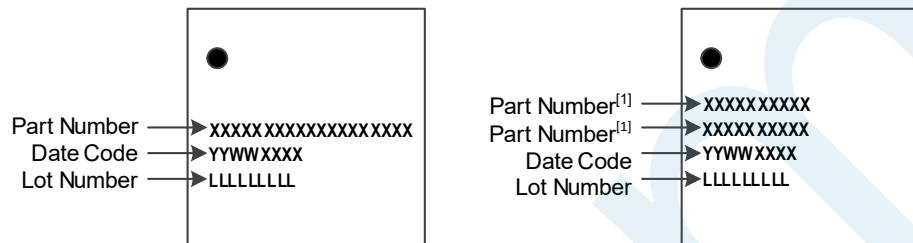

Figure 4-2 Part Naming Examples—Production**Note!**

- For the further detailed information about the package information, please refer to [1.2 Product Resources](#).
- The LittleBee family devices and Arora family devices of the same speed grade have different speeds.
- Both “C” and “I” are used in GOWIN part name marking for one device, such as C2/I1, C1/I0, etc. GOWIN devices are screened using industrial standards, so one same device can be used for both industrial (I) and commercial (C) applications. The maximum temperature of the industrial grade is 100°C, and the maximum temperature of the commercial grade is 85°C. Therefore, if the same chip meets the speed grade 2 in the commercial grade application, the speed grade is 1 in the industrial grade application.

4.2 Package Mark

The device information of GOWINSEMI is marked on the chip surface, as shown in Figure 4-3.

Figure 4-3 Package Mark Examples

Note!

^[1] The first two lines in the right figure above are the “Part Number”.

5 About This Guide

5.1 Purpose

This data sheet describes the features, product resources, structure, AC/DC characteristics, and the ordering information of the GW5A series of FPGA Products, making it easier for users to understand the products, which will help in the selection and use of the device.

5.2 Related Documents

The latest user guides are available on the GOWINSEMI Website. You can find the related documents at www.gowinsemi.com:

5.3 Terminology and Abbreviations

The terminology and abbreviations used in this manual are as shown in [Table 5-1](#).

Table 5-1 Terminology and Abbreviations

Terminology and Abbreviations	Full Name
ADC	Analog to Digital Converter
AER	Advanced Error Reporting

Terminology and Abbreviations	Full Name
ALU	Arithmetic Logic Unit
BSRAM	Block Static Random Access Memory
CFU	Configurable Function Unit
CLS	Configurable Logic Section
CMSER	Configuration Memory Soft Error Recovery
CRU	Configurable Routing Unit
CSI	Camera Serial Interface
CTC	Clock Tolerance Compensation
CTLE	Continuous Time Linear Equalizer
DCS	Dynamic Clock Selector
DFF	D Flip-flop
DNA	Device Identifier
DP	True Dual Port 16K BSRAM
DSI	Display Serial Interface
DSP	Digital Signal Processing
ECC	Error Correction Code
ECRC	End-to-End Cyclic Redundancy Check
ESD	Electro-Static Discharge
FIFO	First In First Out
FPG	FCPBGA
FPGAs	Field Programmable Gate Array
GCLK	Global Clock
GPIO	Gowin Programmable IO
GSR	Global Set/Reset
HCLK	High Speed Clock
IOB	Input/Output Block
LUT	Look-up Table
LW	Long Wire
mDRP	Mini Dynamic Re-Program Port
MIPI	Mobile Industry Processor Interface
OTP	One Time Programmable
PLL	Phase-locked Loop
REG	Register

Terminology and Abbreviations	Full Name
SDP	Semi Dual Port 16K BSRAM
SP	Single Port 16K BSRAM
SSRAM	Shadow Static Random Access Memory
TDM	Time Division Multiplexing

5.4 Support and Feedback

Gowin Semiconductor provides customers with comprehensive technical support. If you have any questions, comments, or suggestions, please feel free to contact us directly using the information provided below.
