

### Improving Panel Uniformity through Specialized Panel Design and Full Process of Glass Thinning

- Utilizing new LCD structure design and process of Color Filter On Array (COA) to eliminate the root cause of color mixing due to displacement of upper and lower substrates.
- Overall glass thickness reduced to 0.2mm to overcome Mura effect.
- Reduced panel stress for good display uniformity and increased product reliability.
- High yield and simplified manufacturing process for efficient quality management.

-  Curved

-  Glass Thinning

## Optimal Curvature Design for Casino Gaming Applications

- Customized curvature and curved types for optimized gaming machines. The innovations in appearance and performance bring more features to attract players.
- Integrated touch solutions combining high performance and high stability.
- One-stop curved display solutions to satisfy different applications requirements.

- High Brightness

- Long Operational Hours (24hrs/7days)

- Portrait / Landscape

## Curved Display

Curved Display

Model	Product Type	Brightness (cd/m <sup>2</sup> )	Glass Thickness
43" UHD	1500R OC / LCM / Panel+	LCM 500 / Panel+ 400	0.2 / 0.2
50" UHD	1500R OC		0.2 / 0.2
55" UHD	800R OC		0.2 / 0.2
